

DF5200HD-DN

Nightline

High Definition Camera, 2 MP, 1080p/60, 720p/120, H.264, Day/Night (ICR), Motor-driven Varifocal Lens, PoE, Box Housing

The cameras of the **Nightline series** have been developed with special attention to changing light conditions for **24-hour video surveillance**. The combination of the most **advanced sensor and encoder technology** provides recordings with excellent contrast, brilliant clarity as well as **highest detail resolution and color fidelity**, even in low light conditions.

The **DF5200HD-DN** is available with an **integrated lens** in a **compact box housing**. It can be conventionally supplied with an external power supply unit or conveniently with **Power over Ethernet**.

Excellent Low-Light characteristics

The **extremely high light sensitivity** of the sensor and the sophisticated **image processing** ensure crisp **color images** even in the dark. In night mode, the camera also provides outstanding results due to the **excellent infrared sensitivity**.

Automatic switching of presets

The camera is equipped with an **ambient light sensor** and a **removable IR cut filter** and can automatically switch between **day and night mode**. In addition, **different day and night presets** can be defined and adjusted for the exposure settings.

Motor-driven varifocal lens with P-Iris

The camera has a **motor-driven varifocal lens** that is perfectly tuned to the image sensor. The adjustment of **zoom, focus and iris** is made conveniently using a **web browser**. The manual lens setting directly at the installation site of the camera is not required.

Digital Image Shift

The **Digital Image Shift** function allows a comfortable **fine adjustment of the captured image section** (horizontal and vertical at 16:9 resolutions, horizontal at 4:3 resolutions) via a **web browser**. Depending on the selected resolution, the used area on the image sensor can be moved and adapted to the local conditions. The **manual fine alignment** of the camera directly at the installation site is **not necessary**.

Video Content Analysis

The integrated **Video Content Analysis (VCA)** detects **movements and objects** in the uncompressed image and analyzes them in real-time (depending on the analysis resolution) with highly developed analysis functions such as **Intrusion Detection** or **Line Crossing**. The detected **events** can be used to trigger the recording of a **SMAVIA recording system**. Together with the detected objects and the corresponding metadata, they are stored in a database. This allows the targeted search and evaluation of the recordings by **SMAVIA Viewing Client** with the **SmartFinder** function.

EdgeStorage

The camera is equipped with a **RAM memory** that is used by the **EdgeStorage** function to store the video stream in case of a network failure (e.g. Spanning Tree, Bursts). When the network is restored, the **SmartBackfill** function ensures fast transmission to the **SMAVIA recording system**. This stores the video stream with high speed and then continues to record the live stream seamlessly.
